Claim 1: Claus disclose at least one seed-bearing device having at least one seed and at least one key-determinative device determining at least one key in response to at least one seed in (fig.1,#100,500). Claus disclose at least one code-determinative device determining at least one code in response to at least one key and at least one controller performing at least one task in response to at least one code in (fig.1,#700).

Claims 2,3: Claus disclose at least one seed-bearing device stores at least one seed at least one predetermined address and at least one key determinative device has stored identification of at least one address in (fig.1,#100).

Claims 4,5: Claus discloses at least one key determinative device comprises at least one key algorithm for determining at least one key in (fig.1).

Claim 6: Claus discloses at least one seed bearing device comprises at least one of at least one key-determinative device in (fig.1,#700).

Claims 7,11: Claus discloses at least one key determinative device comprises at least one of at least one seed-bearing device in (fig.1).

Claims 13-17: Claus disclose a seed bearing device having a first seed; a multi-purpose device having a second seed and determining a first key in response to first seed and a key-determinative device determining a second key in response to second seed in (fig.1).

Claims 18,22: Claus disclose determining at least one key in a first device in response to at least one seed contained within a second device;determining at least one code in second device in response to at least one key and enabling the operational system to perform at least one task in response to at least one code in (fig.1 and col.12,lines 6-43).

Claim 19: Claus discloses determining at least one key comprises executing an algorithm to calculate at least one key in response to at least one seed in (col.3,lines 9-19).
